

**avast! 4 Small Business Server Edition is a special version of avast! antivirus Server Edition, designed exclusively for Microsoft Small Business Servers.**

It represents an economic variant of our complex server antivirus protection, avast! Server Edition, with just one limitation - it can **only be deployed on Windows Small Business Servers versions 2000, 2003 and 2008** (not Windows Servers 2000, 2003 or 2008!).

Please check your system version on your server before you purchase. To do this, simply right click on "My Computer", select "Properties" and check the "System:" description. It should be:

- **Microsoft Windows Server 2000 for Small Business Server, or**
- **Microsoft Windows Server 2003 for Small Business Server, or**
- **Microsoft Windows Server 2008 for Small Business Server**

Similar to Microsoft Small Business Server, avast! Small Business Server Edition comes in two variants:

## Standard Version

The **Standard** version contains the following components:

- **avast! Server Edition, i.e. the antivirus kernel and file system protection**
- **avast! Exchange Server plugin, to protect all traffic in the Exchange Server environment**
- **avast! Sharepoint Server plugin, to protect Microsoft Sharepoint Server**

## Premium Version

The **Premium** version contains the following components:

- **avast! Server Edition, i.e. the antivirus kernel + file system protection**
- **avast! Exchange Server plugin, to protect all traffic in the Exchange Server environment**
- **avast! Sharepoint Server plugin, to protect Microsoft Sharepoint Server**
- **avast! MS Proxy/ISA Server plugin, to protect the MS ISA Server**

All these components are equivalent to our full-blown server side products - their only limitation is the fact that they are restricted to the Microsoft Small Business Server 2000/2003/2008 environment.

For more information on the products contained in the SBS Edition, please see the attached data sheets for the Server Edition, Exchange plugin and ISA plugin.

## Main Features

### ANTIVIRUS KERNEL

- Almost 100% detection
- Outstanding performance
- ICSA certified

### USER INTERFACE

- Memory test during the program startup
- Simple or Enhanced User Interface
- Testing whole disks or selected folders
- Working with the scan results - actions on infected files
- Storing the scan results (history)
- Virus encyclopedia
- Log Viewer
- Various appearances - skin support
- Boot-time scans
- Command-line scanner

### UPDATES

- The system of incremental updates guarantees low traffic
- The updates can be completely automatic
- PUSH updates immediately when published

### OTHER

- Speed optimized
- Can run parallel on multi-CPU machines
- Repairing files using automatically generated Virus Recovery Database (VRDB)
- Built-in notification manager
- Task scheduler

## Minimum System Requirements

### STANDARD VERSION

- Microsoft Small Business Server 2000/2003/2008 Standard Edition

### Premium Version

- Microsoft Small Business Server 2000/2003/2008 Premium Edition

### BOTH VERSIONS

- PC Pentium
- 128 MB RAM (256 MB recommended)
- 80 MB of free hard disk space (20 MB for program, rest for VRDB and the Virus Chest)
- If used in conjunction with SBS 2000, SP2 or higher for MS Exchange is required
