

avast! Mobile Premium

avast! Mobile Premium keeps your Android devices safe from viruses, malware, and spyware. It helps you locate your lost phone or tablet through web-based locate features. Numerous remote options – such as device lock, memory wipe, SMS-sending, data recovery, obtaining a photo and/or audio, and more – make it the leading Android security app for anti-theft/recovery capabilities.

Priceless data backup features include backup of contacts, SMS/call history, photos, video, audio, and apps. Simple, practical tools like network meter, app manager/locking, ad detection, our unique Geofencing, and even a firewall (on rooted phones) give you complete control of your phone/tablet operations.

Key Features

avast! Mobile Security

new! MOBILE BACKUP

avast! Mobile Backup saves your contacts and numbers, call logs, SMS history, photos, and other irreplaceable data to your AVAST Account (and, optionally, Google Drive) to ensure that your priceless data is never lost.

new! GEOFENCING

Your phone/tablet performs specified actions (e.g. lock, siren, send location) when outside of some set perimeter (e.g. you go to a cafe and enable it with a 500m perimeter, so if somebody steals your phone and takes it beyond this perimeter, it activates your specified actions).

new! APP LOCK

Lock an unlimited number of apps to prevent their unauthorized access.

new! PASSWORD CHECK

Automatically locks after 3 wrong attempts to unlock.

new! AD DETECTOR

Detects ads and provides full details of their tracking systems.

AVAST! WIDGET

Displays a status bar on your phone's desktop, providing instant easy access to your Android antivirus app.

NETWORK METER

Shows how much data transfers into and out of your phone via 3G and/or Wi-Fi connections. See stats for the day, month, or year, with direct access to the App Manager if you want to make changes.

SITECORRECT

Enables auto-correct of mistyped URLs (e.g. goggle.com → google.com), with options for 'auto-redirect' or 'request confirmation'.

AVAST! ACCOUNT INTEGRATION

See the status of your devices in your avast! Account.

ANTIVIRUS

Performs on-demand scans of all installed apps and memory card content, as well as on-access scans of apps upon first execution. Options for scheduling scans, virus definition updates, uninstalling apps, deleting files, or reporting a false-positive to our virus lab.

PRIVACY REPORT

Scans and displays (grid) access rights and intents of installed apps, identifying potential privacy risks, so you know how much info you are really providing to each app.

SMS/CALL FILTERING

Filter calls and/or messages from contact list using set parameters based on day(s) of the week, start time, and end time. Blocked calls redirect to voicemail, while blocked messages are stored via filter log. Also possible to block outgoing calls.

APP MANAGER

Similar to Windows Task Manager, it shows a list of running apps and their size (MB), CPU load, used memory, and number of threads and services – with an option to stop or uninstall.

SYSTEM REQUIREMENTS:

Operating Systems Supported:

Android 2.1.x Android 3.x
Android 2.2.x Android 4.x
Android 2.3.x

MINIMUM HARDWARE REQUIREMENTS:

Any phone capable of running a supported system

AWARDS:

WEB SHIELD

Part of the avast! WebRep cloud, the avast! Web Shield for Android scans each URL that loads and warns you if the browser loads a malware-infected URL.

FIREWALL

Add a firewall to stop hackers. Disable an app's internet access when using Wi-Fi, or when using 3G or roaming mobile networks. Now it's also possible to define custom rules for the firewall and to see an in-depth firewall log. (Works only on rooted phones.)

avast! Anti-Theft

WEB-BASED CONTROL

Allows you to control your phone's Anti-Theft options directly from your avast! Account web portal.

APP DISGUISE

After downloading avast! Anti-Theft, user can choose a custom name that disguises the app (e.g. call it „Pinocchio game“) so that it is even harder for thieves to find and remove.

STEALTH MODE

Once anti-theft is enabled, the app icon is hidden in the app tray, leaving no audio or other trace on the target phone – the app is „invisible“, making it difficult for thieves to detect or remove.

SELF-PROTECTION

Extremely difficult for thieves to remove (especially on rooted phones), Anti-Theft protects itself from uninstall by disguising its components with various self-preservation techniques. On rooted phones it is able to survive hard-resets and can even disable the phone's USB port.

SIM-CARD-CHANGE NOTIFICATION

If stolen and a different (unauthorized) SIM card inserted, the phone can lock, activate siren, and send you notification (to remote device) of the phone's new number and geo-location.

Remote Features

new! REMOTE SMS

Remotely send SMS from the phone.

new! REMOTE DATA RECOVERY

Remotely retrieve data from the phone.

new! REMOTE IDENTIFICATION

Take picture of the thief when he/she tries to unlock device (use front or back camera, with face recognition). Record audio, with voice recognition.

REMOTE SIREN

Option to sound a loud siren, which returns always to maximum volume if thieves try to silence. This siren sound can also be customized (e.g. record own siren sound or select siren sound from file).

REMOTE LOCK

To protect your data, phone can be locked remotely and then cannot be accessed again without entering the password specified by the user.

REMOTE DISPLAY

Remotely send a customized message to locked or non-locked phone display (e.g. with a reward for its return).

REMOTE LOCATE

Remotely locate phone via GPS, WiFi, or mobile network – for maximum accuracy. Can locate either once or continuously (GPS can be auto-enabled on all rooted phones or non-rooted phones from Android 1.6 to 2.2).

REMOTE MEMORY WIPE

Remotely trigger a full, permanent wipe of all phone data (e.g. contacts, call log, SMS/MMS, browser history, apps, email accounts), including reliable, physical wipe of all memory cards from Android 2.2 on (limited functionality on older versions).

REMOTE CALLING

Remotely have the phone call you elsewhere with screen blackened, so that thieves cannot see it. This way you can listen to the phone's surroundings.

REMOTE FORWARDING

Remotely activate/deactivate option to forward or copy call data and /or SMS messages to another device. Call data goes to remote device, but not the call itself. SMS messages, however, are forwarded in their entirety („CC“ copies also to original device).

REMOTE „LOST“ NOTIFICATION

Remotely send a „Lost“ command to trigger same actions as SIM card change (e.g. phone lock, siren, or USB lock). „Found“ command deactivates „Lost“ command.

REMOTE SMS SENDING

Remotely trigger phone to send an SMS to another phone. That way, if you forget the phone somewhere, you can reply nonetheless to incoming calls or SMS messages.

REMOTE RESTART

Reboot the phone by SMS command, which will lock the phone by asking for the SIM's PIN code. (Works only on rooted phones.)

REMOTE HISTORY

Query the call log, contacts, and SMS messages remotely (with each forwarded as a separate SMS message, but able to be filtered).

LOW BATTERY NOTIFICATION

Phone is able to send low battery notification to a secondary device.

REMOTE SETTINGS CHANGE

All of the Anti-Theft settings can be changed remotely.
